

The Future of Sustainable Data

Dominik Huebler

Associate Director, NERA Economic Consulting

Curriculum Vitae

Dominik Huebler is an experienced economist working on regulatory issues covering old (physical infrastructure-driven) and new (data-driven) monopolies. Together with Wolf Theiss, he recently worked on one of the first Art. 82 GDPR cases (damages for privacy breaches) to make it to the European Court of Justice. He has written several articles on the appropriate valuation of data and has worked on various different approaches for determining the appropriate compensation for regulated entities required to provide access to goods and services to third parties.

Topic

“Reasonable compensation” under the draft Data Act – enabler or showstopper for a data economy?

The draft Data Act hopes to incentivize data holders to create and share data by giving them a right to “reasonable compensation”. I will take an economist’s view on different approaches to what reasonable should mean in this context.

Wolf Theiss
